PROFILE

Motivated B Tech Computer Science student (2027) with strong foundations in Data Structures and Algorithms using Java and hands-on experience in full stack web development with React.js, Node.js, Express.js, and Tailwind CSS. Skilled in building scalable, API driven web applications and integrating third-party services for real world functionality. Additionally experienced in Data Science and AI fundamentals, including data cleaning, exploratory data analysis (EDA), visualization, and basic machine learning using Python (NumPy, Pandas, Matplotlib, Scikit-learn). Specialized in Generative AI, with practical experience integrating Large Language Models (LLMs), engineering dynamic tool calling pipelines, and designing autonomous AI agents to automate complex workflows.

EDUCATION

Bachelor of Technology in Computer Science 2023 – 2027
Guru Gobind Singh Indraprastha University

12th Science (PCM) 2022 – 2023
Vidya Jain Public School

TECHNICAL SKILLS

Languages: C, Java, C++, Python, JavaScript, SQL, PHP

Core CS Concepts: Data Structures & Algorithms, OOP, DBMS, OS

Web & Backend: React.js, Node.js, Tailwind CSS, Express.js, MongoDB, REST APIs

AI /ML/GenAI: NumPy, Pandas, ML Models, NLP, Generative AI, RAG, LangChain, LLM Integration, Vector Database

Tools: Git, GitHub, Postman, VS Code

PROJECTS

CodeArena

Real-Time Competitive Programming Platform (React.js, Node.js, Tailwind CSS, Mongo DB, Socket.io)

- Engineered a high-concurrency matchmaking system using Socket.io and an ELO rating algorithm to pair users based on skill levels for live 1v1 coding duels.
- Architected four distinct competitive modes - Rapid Duel, Bug Hunter, Code Duel, and Complexity Duel each with specialized scoring logic and real time progress syncing.
- Implemented room-based architecture for managing two different users joining and leaving the room sessions.

LiveDemo [🔗](#)

HerbTrace

AI & Blockchain-Powered Herb Traceability System (FastAPI, Python, TensorFlow/Keras, Solidity, Web3.py, React.js, Tailwind CSS)

- Developed a full stack system to ensure the authenticity and transparency of Ayurvedic herbs from farmer to consumer using AI and Blockchain.
- Integrated a machine learning model (CNN) using TensorFlow and Keras to automatically classify herb species from uploaded images with high accuracy.
- Deployed Ethereum-based Solidity smart contracts via Web3.py to maintain permanent, tamper-proof sourcing and processing records on the blockchain.

LiveDemo [🔗](#)

MarketAgent | AI-Powered Financial RAG System

React.js, Node.js, Express, LangChain.js, Groq API (Llama 3.3-70B), Polygon.io, Tavily AI

- Architected an autonomous financial intelligence platform utilizing an Agentic Retrieval-Augmented Generation (RAG) architecture to synthesize structured research reports.
- Engineered dynamic tool-calling pipelines using LangChain.js to integrate Google Gemini with external data sources (Polygon.io, Tavily AI), grounding the model in real-time facts to eliminate hallucinations.
- Built robust backend fallback mechanisms in Node.js/ Express to handle third-party API rate limits, ensuring continuous system availability during autonomous data retrieval.
